

COSC 330 Project 1

The data you will use for this project has been provided to you by email. You must work as a pair with your assigned partner to create a normalized (to 3NF) schema, create a database in sqlite, and populate it with the data provided to you.

The required files to submit for this project are as follows:

- the original provided CSV file containing the data
- the SQL file that contains the CREATE statements representing your schema (7 points)
- the Python script that loads the CSV file into the sqlite database (10 points)
- the final sqlite database (db) file containing all of the data (3 points)
